

Robert Kenneth Valenzuel
III - AINS
IAS MIDTERM

Cyber Threat Management

Cisco verifies the earner of this badge successfully completed the Cyber Threat Management course. The holder of this student-level credential is familiar with cybersecurity policies and governance to ensure an organization complies with ethics standards and legal and regulatory frameworks. They understand how to do a network vulnerability assessment and create a risk management plan, as well as post-incident response.

The Cyber Threat Management course focuses on understanding, identifying, and managing the different types of cyber threats that can affect computer systems, networks, and digital information. It introduces learners to the wide range of cyber attacks that may be carried out by threat actors, including malware infections, phishing campaigns, ransomware attacks, social engineering techniques, and other forms of malicious activities. The course explains how cyber threats continue to evolve as technology advances, making cybersecurity an essential part of modern organizations. It also discusses how attackers use different tools and techniques to exploit system weaknesses, steal sensitive data, or disrupt services. In addition, the course highlights the importance of threat intelligence, risk assessment, and vulnerability analysis in preventing potential cyber incidents. It explains how cybersecurity teams monitor networks, collect security data, and analyze suspicious activities to detect possible attacks before they cause serious damage. The course also explores how organizations develop incident response strategies and security policies to effectively manage cyber threats. Furthermore, it discusses the responsibilities of cybersecurity professionals in investigating security incidents, documenting findings, and improving security defenses based on previous attacks. Overall, the course provides a deeper and more comprehensive understanding of how cyber threats are analyzed, monitored, and managed as part of an organization's overall cybersecurity and risk management strategy.

total number of training hours: 7 HOURS

Certificate of Course Completion

ROBERT KENNETH VALENZUELA

has successfully achieved student level credential for completing the Cyber Threat Management course.

The student was able to proficiently:

- Explain why organizations must conform with specific compliance frameworks according to institutional context.
- Evaluate network and systems vulnerability.
- Given an organizational context, create a vulnerability assessment plan by identifying and describing relevant threats.
- Explain how IT systems vulnerability is assessed.
- Select security controls based on organizational relevance and create a risk management plan.
- Explain how organizations recover from cybersecurity exploits.
- Given organizational contexts, recommend disaster recovery and incident response activities.
- Explain how forensic investigations of internal and external security incidents are performed.
